

What is claimed is:

1	1.	A method for supplying a consistent set of data to a software application, the
2		method comprising the steps of:
3		launching said software application;
4		identifying a particular set of data that is required by the software
5		application;
6		requesting a first process to obtain a snapshot time from a database server
7		associated with a first database, wherein the snapshot time causes all
8		subsequent reads of said first database by the first process to return
9		data that reflects a database state associated with the snapshot time;
10		after the first process obtains the snapshot time, causing the first process to
11		extract the particular set of data from the first database; and
12		supplying said software application with the particular set of data that was
13		extracted from the first database.
1	2.	The method of Claim 1, further comprising the step of causing a second
2		process to store the particular set of data in a second database.

- process to store the particular set of data in a second database.
- 7
 3. The method of Claim 1, wherein the step of identifying the particular set of data
- includes the step of creating a copy table list, wherein the copy table list contains 2
- entries that identify the particular set of data in the first database. 3

	3	
1	J .	The method of Claim 2, wherein the step of causing the second process to
2		store the particular set of data in the second database includes the steps of:
3		writing the particular set of data to one or more flat files; and
4		executing a loader process, wherein the loader process loads the particular set
5		of data from the one or more flat files to the second database.
	P	1
1	5/	The method of Claim 3, further comprising the steps of:
2		executing a delete process, wherein the delete process uses the copy table list
3		to identify data that needs to be deleted in a second database; and
4		deleting the identified data from the second database.
	y	B
1	6.	The method of Claim A, wherein the step of writing the particular set of data
2		to one or more flat files includes the steps of:
3		the first process informing a coordinator process when it has finished writing
4		data to a particular flat file; and
5		the coordinator using the information to tell the loader process when it can
6		begin loading the flat file into the second database.
	4	3
1	7.	The method of Claim A, wherein the step of:
2		writing the particular set of data to the flat file includes the step of writing
3		the particular set of data to a plurality of flat files; and
4		executing the loader process includes the step of executing a plurality of

loader processes, wherein the plurality of loader processes load the

6		particular set of data from the plurality of flat files to the second
7		database.
	4	
1	% .	The method of Claim 2, wherein the step of supplying said software
2	·	application with data from said particular set of data includes the steps of:
3		said software application reading the particular set of data stored in the
4		second database; and
5		said software application generating a planning schedule based on the
6		particular set of data.
		1
1	9.	The method of Claim, where the step of creating the copy table list
2		includes the steps of:
3		communicating with the software application to identifying a set of planning
4		data, where the planning data is required for generating a planning
5		schedule; and
6		creating the copy table list based on the identified set of planning data.
1	10.	The method of Claim 1, wherein the step of supplying said software
2		application with data from said particular set of data includes the steps of:
3		writing the particular set of data to one or more flat files; and
4		supplying the one or more flat files to said software application, wherein said
5		software application generates a planning schedule based on
6		information contained in the one or more flat files

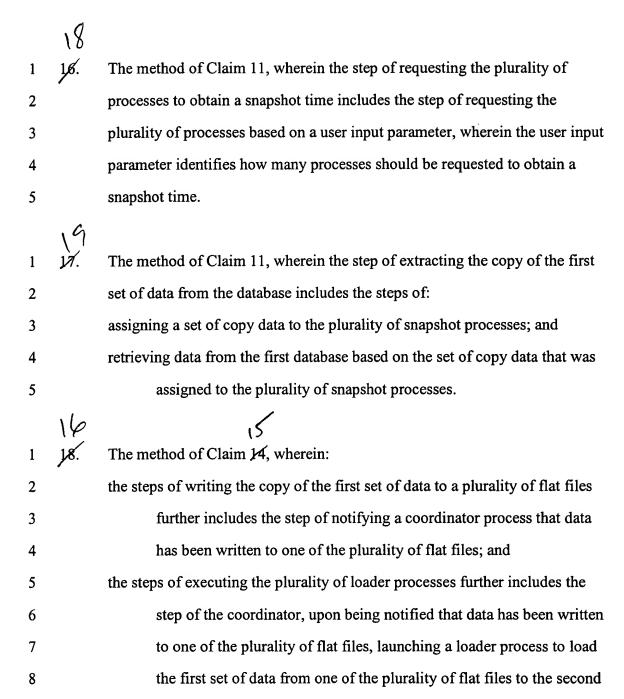

1	11.	A method for producing a copy of data from a first database, the method
2		comprising the steps of:
3		locking a first set of data in the first database;
4		after locking the first set of data,
5		requesting a plurality of processes to obtain snapshot times from a
6		database server associated with said first database, wherein
7		the snapshot times cause all subsequent reads of the first
8		database by the plurality of processes to return data from the
9		first database as of said snapshot times;
10		waiting a particular period of time for the plurality of processes to be
11		assigned snapshot times;
12		releasing the locks on the first set of data in the first database;
13		using a successful set of said plurality of processes to extract a copy
14		of the first set of data from the first database, wherein said
15		successful set includes only those processes of the plurality of
16		processes that were assigned a snapshot time within the
17		particular period of time; and
18		storing the copy of the first set of data separate from said first of data
1	12.	The method of Claim 11, wherein the step of identifying the first set of data
2		includes the step of creating a copy table list, wherein the copy table list
3		contains entries that identify the first set of data in the first database

1	13.	The method of Claim 12, where the step of creating the copy table list
2		includes the steps of:
3		identifying a set of planning data, where the planning data is required to
4	•	generate a planning schedule; and
5	•	creating the copy table list based on the planning data required to generate
6		the planning schedule.
1	14.	The method of Claim 11, wherein the step of storing the copy of the first set
2		of data includes the steps of:
3		writing the copy of the first set of data to a plurality of flat files; and
4		executing a plurality of loader processes, wherein the plurality of loader
5		processes load the copy of the first set of data from the plurality of
6		flat files to a second database.
	J	
1	15.	The method of Claim 12, further comprising the steps of:
2		executing a plurality of delete processes, wherein the plurality of delete
3		processes use the copy table list to identify data that needs to be
4		deleted in a second database; and
5		deleting the identified data from the second database.

database.

	17	15
1	19.	The method of Claim 14, wherein the step of writing the copy of the first set
2		of data to the plurality of flat files includes the steps of:
3		the plurality of process informing a coordinator process when it has finished
4		writing data to a particular flat file; and
5		the coordinator using the information to tell one of the plurality of loader
6		processes when it can begin loading the particular flat file into the
7		second database.
1	20.	The method of Claim 11, wherein the step of storing the copy of the first set
2		of data includes the steps of storing the copy of the first set of data as blob
3		files that are separate from said first of data.
1	21.	The method of Claim 11, wherein the step of storing the copy of the first set
2		of data includes the steps of storing the copy of the first set of data in said
3		first of data.

A computer-readable medium carrying one or more sequences of one or more

2

3

22.

	-
2	instructions for supplying a consistent set of data to a software application,
3	the one or more sequences of one or more instructions including instructions
4	which, when executed by one or more processors, cause the one or more
5	processors to perform the steps of:
6	launching said software application;
7	identifying a particular set of data that is required by the software application;
8	requesting a first process to obtain a snapshot time from a database server associated
9	with a first database, wherein the snapshot time causes all subsequent reads
10	of said first database by the first process to return data that reflects a database
11	state associated with the snapshot time;
12	after the first process obtains the snapshot time, causing the first process to extract
13	the particular set of data from the first database; and
14	supplying said software application with the particular set of data that was extracted
15	from the first database.
1	23. The computer-readable medium of Claim 22, wherein the computer-readable

medium further comprises instructions for performing the step of causing a

second process to store the particular set of data in a second database.

	2/	
1	24.	The computer-readable medium of Claim 22, wherein the step of
2		identifying the particular set of data includes the step of creating a copy
3		table list, wherein the copy table list contains entries that identify the
4		particular set of data in the first database.
	24.	
1	25.	The computer-readable medium of Claim 23, wherein the step of causing the
2		second process to store the particular set of data in the second database
3		includes the steps of:
4		writing the particular set of data to one or more flat files; and
5		executing a loader process, wherein the loader process loads the particular set
6		of data from the one or more flat files to the second database.
	95	$n\mathcal{U}$
1	26.	The computer-readable medium of Claim 25, wherein the step of writing the
2		particular set of data to one or more flat files includes the steps of:
3		the first process informing a coordinator process when it has finished writing
4		data to a particular flat file; and
5		the coordinator using the information to tell the loader process when it can
6		begin loading the flat file into the second database.

1	27.	A computer-readable medium carrying one or more sequences of one or more
2		instructions for producing a copy of data from a first database, the one or
3		more sequences of one or more instructions including instructions which,
4		when executed by one or more processors, cause the one or more processors
5		to perform the steps of:
6	lockii	ng a first set of data in the first database;
7	after :	locking the first set of data,
8	reque	sting a plurality of processes to obtain snapshot times from a database server
9		associated with said first database, wherein the snapshot times cause all
10		subsequent reads of the first database by the plurality of processes to return
11		data from the first database as of said snapshot times;
12	waitii	ng a particular period of time for the plurality of processes to be assigned
13		snapshot times;
14	releas	sing the locks on the first set of data in the first database;
15	using	a successful set of said plurality of processes to extract a copy of the first set of
16		data from the first database, wherein said successful set includes only those
17		processes of the plurality of processes that were assigned a snapshot time
18		within the particular period of time; and
19	storin	g the copy of the first set of data separate from said first of data.

1	28.	The computer-readable medium of Claim 27, wherein the step of identifying
2		the first set of data includes the step of creating a copy table list, wherein the
3		copy table list contains entries that identify the first set of data in the first
4		database.
1	29.	The computer-readable medium of Claim 27, wherein the step of storing the
2		copy of the first set of data includes the steps of:
3		writing the copy of the first set of data to a plurality of flat files; and
4		executing a plurality of loader processes, wherein the plurality of loader
5		processes load the copy of the first set of data from the plurality of
6		flat files to a second database.
	31	
1	<i>3</i> 0.	The computer-readable medium of Claim 27, wherein the step of extracting
2		the copy of the first set of data from the database includes the steps of:
3		assigning a set of copy data to the plurality of snapshot processes; and
4		retrieving data from the first database based on the set of copy data that was
5		assigned to the plurality of snapshot processes.

1	32.	A computer system for supplying a consistent set of data to a software
2		application, the computer system comprising:
3		a memory;
4		one or more processors coupled to the memory; and
5		a set of computer instructions contained in the memory, the set of computer
6		instructions including computer instructions which when executed by
7		the one or more processors, cause the one or more processors to
8		perform the steps of:
9		launching said software application;
10		identifying a particular set of data that is required by the software
11		application;
12		requesting a first process to obtain a snapshot time from a database
13		server associated with a first database, wherein the snapshot
14		time causes all subsequent reads of said first database by the
15		first process to return data that reflects a database state
16		associated with the snapshot time;
17		after the first process obtains the snapshot time, causing the first
18		process to extract the particular set of data from the first
19		database; and
20		supplying said software application with the particular set of data that
21		was extracted from the first database.

The computer system of Claim 32, further including instructions for

1

33.

2		performing the step of causing a second process to store the particular set of
3		data in a second database.
	nle	
1	34.	The computer system of Claim 32, wherein the step of identifying the
2		particular set of data includes the step of creating a copy table list, wherein
3		the copy table list contains entries that identify the particular set of data in
4		the first database.
	21/	
1	33.	The computer system of Claim 33, wherein the step of causing the second
2		process to store the particular set of data in the second database includes the
3		steps of:
4		writing the particular set of data to one or more flat files; and
5		executing a loader process, wherein the loader process loads the particular set
6		of data from the one or more flat files to the second database.
	35	24
1	3 6.	The computer system of Claim 38, wherein the step of writing the particular
2		set of data to one or more flat files includes the steps of:
3	the firs	st process informing a coordinator process when it has finished writing data to
4		a particular flat file; and
5	the co	ordinator using the information to tell the loader process when it can begin

loading the flat file into the second database.

1	37.	A computer system for producing a copy of data from a first database, the
2		computer system comprising:
3		a memory;
4		one or more processors coupled to the memory; and
5		a set of computer instructions contained in the memory, the set of computer
6		instructions including computer instructions which when executed by
7		the one or more processors, cause the one or more processors to
8		perform the steps of:
9		locking a first set of data in the first database;
10		after locking the first set of data,
11		requesting a plurality of processes to obtain snapshot times
12		from a database server associated with said first
13		database, wherein the snapshot times cause all
14		subsequent reads of the first database by the plurality of
15		processes to return data from the first database as of said
16		snapshot times;
17		waiting a particular period of time for the plurality of
18		processes to be assigned snapshot times;
19		releasing the locks on the first set of data in the first database;
20		using a successful set of said plurality of processes to extract a
21		copy of the first set of data from the first database,
22		wherein said successful set includes only those
23		processes of the plurality of processes that were

24		assigned a snapshot time within the particular period of	
25		time; and	
26		storing the copy of the first set of data separate from said first	
27		of data.	
1	38.	The computer system of Claim 37, wherein the step of identifying the first set	
2		of data includes the step of creating a copy table list, wherein the copy table	
3		list contains entries that identify the first set of data in the first database.	
1	39.	The computer system of Claim 37, wherein the step of storing the copy of the	
2		first set of data includes the steps of:	
3	writing the copy of the first set of data to a plurality of flat files; and		
4	executing a plurality of loader processes, wherein the plurality of loader processes		
5		load the copy of the first set of data from the plurality of flat files to a second	
6		database.	
	41,		
1	40.	The computer system of Claim 37, wherein the step of extracting the copy of	
2		the first set of data from the database includes the steps of:	
3		assigning a set of copy data to the plurality of snapshot processes; and	
4		retrieving data from the first database based on the set of copy data that was	
5		assigned to the plurality of snapshot processes.	

The computer system of Claim 39, wherein the step of writing the copy of		
the first set of data to the plurality of flat files includes the steps of:		
the plurality of process informing a coordinator process when it has finish		
writing data to a particular flat file; and		
the coordinator using the information to tell one of the plurality of loader		
processes when it can begin loading the particular flat file into the		
second database.
